14. North West	12.6	12.2	9.4	10.8

Data sources: Canadian Institute for Health Information, Discharge Abstract Database (CIHI–DAD) and National Ambulatory Care Reporting System (NACRS); 2003/04–2009/10.

Inclusion criteria: All patients aged ≥18 years readmitted to an emergency department or acute inpatient setting with a diagnosis of stroke (ischemic or hemorrhagic) or transient ischemic attack within 365 days of the initial stroke or TIA event in each year.

Exclusion criteria: Patients with an elective admission, scheduled emergency department visit or transfer within a facility or between facilities within 24 hours.

¹ Indirect standardization based on an age-sex regression model was used to calculate rates.

² Based on unique patients (i.e., does not include multiple patient-visits).

Notes:

(1) No washout periods were applied; for example, if a patient's first hospitalization for stroke had a discharge date of March 31, 2005 (FY 2004/05), followed by another hospitalization for stroke/TIA on April 1, 2005 (FY 2005/06), the April 1 hospitalization would be considered the first hospitalization in 2005/06 and not a readmission related to the hospitalization in 2004/05.

(2) Facility-based analysis (i.e., the location of the facility was used to report regional performance).

Data sources: Canadian Institute for Health Information, Discharge Abstract Database (CIHI-DAD) and National Ambulatory Care Reporting System (NACRS), 2003/04–2009/10.

Inclusion criteria: All patients aged ≥18 years readmitted for any cause to an acute inpatient setting within 30 days of initial stroke (ischemic or hemorrhagic) or transient ischemic attack event in each year.

Exclusion criteria: Patients with an elective admission or transfer within a facility or between facilities within 24 hours of discharge from the emergency department or inpatient care.

¹ Indirect standardization based on an age-sex regression model was used to calculate rates.

² Based on unique patients (i.e., does not include multiple patient-visits).

Notes:

(1) No washout periods were applied; for example, if a patient's first hospitalization for stroke had a discharge date of March 31, 2005 (FY 2004/05), followed by another hospitalization for stroke/TIA on April 1, 2005 (FY 2005/06), the April 1 hospitalization would be considered the first hospitalization in 2005/06 and not a readmission related to the hospitalization in 2004/05.

(2) Facility-based analysis (i.e., the location of the facility was used to report regional performance).

(3) Cells in which there were no reported/available data are marked with a hyphen (-).
