ACKNOWLEDGEMENTS

This document is the product of many collaborative efforts. The authors wish to acknowledge the contributions of the following individuals at the Institute for Clinical Evaluative Sciences: Anjie Huang, Data Analyst; Susan Shiller, Director, Communications; and Nancy MacCallum, Editor and Publications Coordinator.

We would also like to thank the staff of the Diabetes Regional Coordination Centres for their invaluable input on the selection of measures presented in this report.

ABOUT THE INSTITUTE FOR CLINICAL EVALUATIVE SCIENCES

The Institute for Clinical Evaluative Sciences (ICES) is an independent, non-profit organization that produces knowledge to enhance the effectiveness of health care for Ontarians. Internationally recognized for its innovative use of population-based health information, ICES evidence supports health policy development and guides changes to the organization and delivery of health care services.

Key to our work is our ability to link population-based health information, at the patient level, in a way that ensures the privacy and confidentiality of personal health information. Linked databases reflecting 13 million of 33 million Canadians allow us to follow patient populations through diagnosis and treatment and to evaluate outcomes.

ICES brings together the best and the brightest talent across Ontario. Many of our scientists are not only internationally recognized leaders in their fields but are also practicing clinicians who understand the grassroots of health care delivery, making the knowledge produced at ICES clinically

focused and useful in changing practice. Other team members have statistical training, epidemiological backgrounds, project management experience or communications expertise. The variety of skill sets and educational backgrounds ensures a multi-disciplinary approach to issues and creates a real-world mosaic of perspectives that is vital to shaping Ontario's future health care system.

ICES receives core funding from the Ontario Ministry of Health and Long-Term Care. In addition, our faculty and staff compete for peer-reviewed grants from federal funding agencies, such as the Canadian Institutes of Health Research, and receive project-specific funds from provincial and national organizations. These combined sources enable ICES to have a large number of projects underway, covering a broad range of topics. The knowledge that arises from these efforts is always produced independent of our funding bodies, which is critical to our success as Ontario's objective, credible source of evidence guiding health care.

“ICES brings together the best and the brightest talent across Ontario. Many of our scientists are not only internationally recognized leaders in their fields but are also practicing clinicians who understand the grassroots of health care delivery.”

TABLE OF CONTENTS

- I Publication Information
- II Authors' Affiliations
- II Acknowledgements
- III About the Institute for
Clinical Evaluative Sciences

1 KEY FINDINGS**2 INTRODUCTION**

- 2 Scope of the problem
- 3 The Ontario Diabetes Strategy
- 4 Purpose of this report
- 5 Population-level measures included
in this report
 - 5 Diabetes burden
 - 5 Acute complications of diabetes
 - 6 Chronic complications of diabetes
 - 6 Measures of complexity of the
diabetic population
 - 6 Unique populations with diabetes
 - 7 Related diabetes services
- 7 Structure of this report

**8 OVERVIEW OF DATA SOURCES
AND METHODS**

- 9 Data sources
- 11 Methods
- 12 Data limitations and considerations

13 LIST OF EXHIBITS**24 RESULTS**

- 24 Part A / Diabetes Measures Across Ontario
- 38 Part B / Diabetes Measures by Region

306 CONCLUSION

- 306 Lessons learned
- 308 Next steps

309 REFERENCES**313 APPENDICES**

- 314 Appendix A / Data sources and definitions
of measures included in this report
- 321 Appendix B / Reference maps of census
subdivisions in Ontario
