Foreword

This report estimates public payments to Ontario physicians from multiple sources between fiscal years 2005/06 and 2022/23, by specialty and physician sex.

ICES has released previous reports in 2012, 2017 and 2019. The 2024 iteration is the first to stratify by physician sex; male and female. With the receipt of new data from the Ontario Physician Human Resource Data Centre (OPHRDC) with respect to physician specialty, and improvements in allocating block payments to individual physicians, all estimates from 2005/06 have been recalculated and the 2024 report should be taken as the most up-to-date and reliable.

Highlighted Results

The number of physicians increased over time, especially female physicians

Between 2005/06 and 2022/23, the number of active physicians increased (Figure 1). Females physicians increased at a greater rate; between 2005/06 and 2022/23, the number of active female physicians more than doubled. Female physicians represented 44% of the total number of physicians in 2022/23 compared to only 30% in 2005/06.

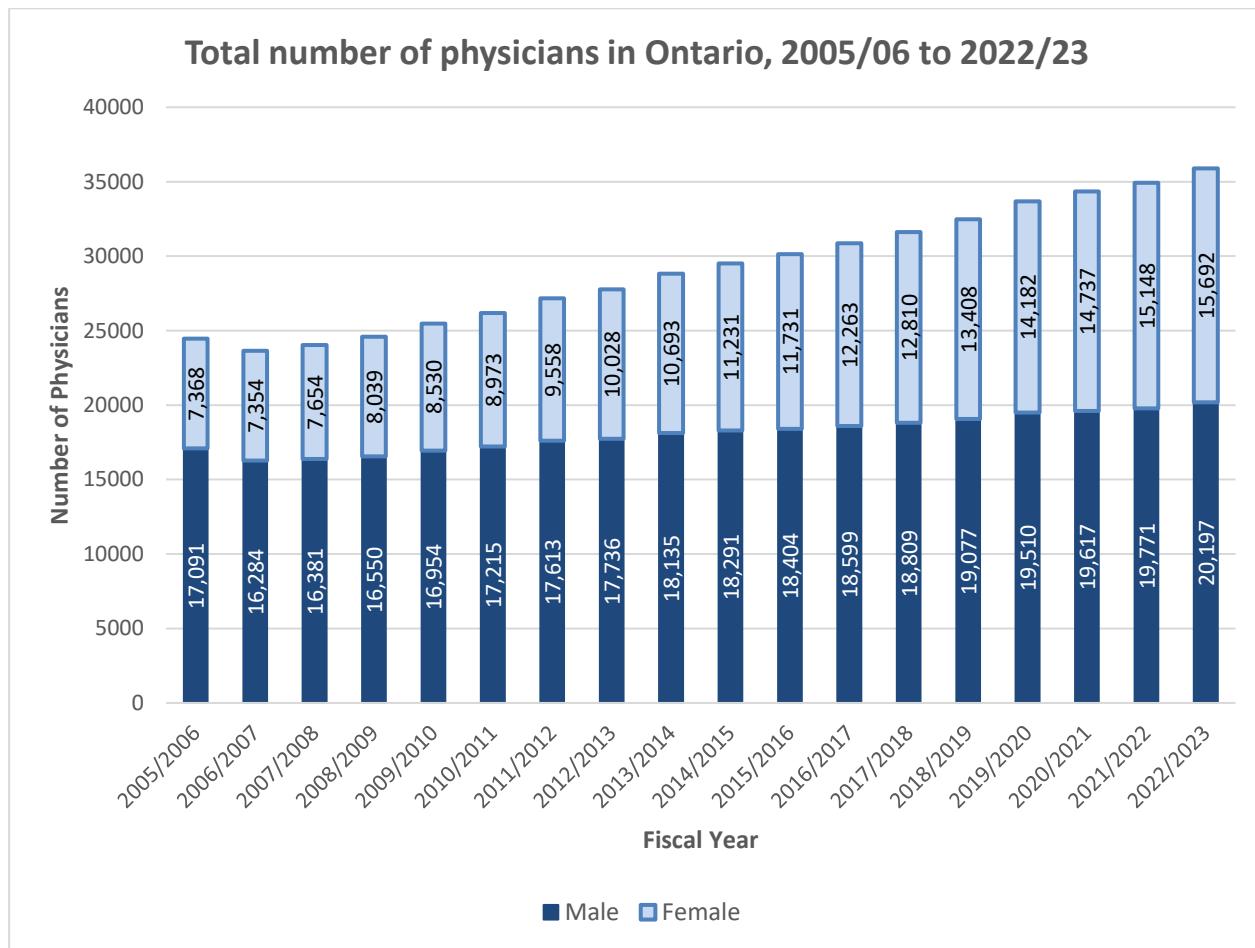

Figure 1: Total number of physicians and FTEs in Ontario, by year and physician sex, between 2005/06 and 2022/23. FTE = Full-time equivalent.

Female physicians get paid less than male physicians

While average payments per physician have increased over time, female physicians are consistently paid less than male physicians, even when measured per full-time equivalent (FTE). The difference per physician FTE ranged from \$54,289 less in 2005/06 to \$84,962 less in 2022/23.

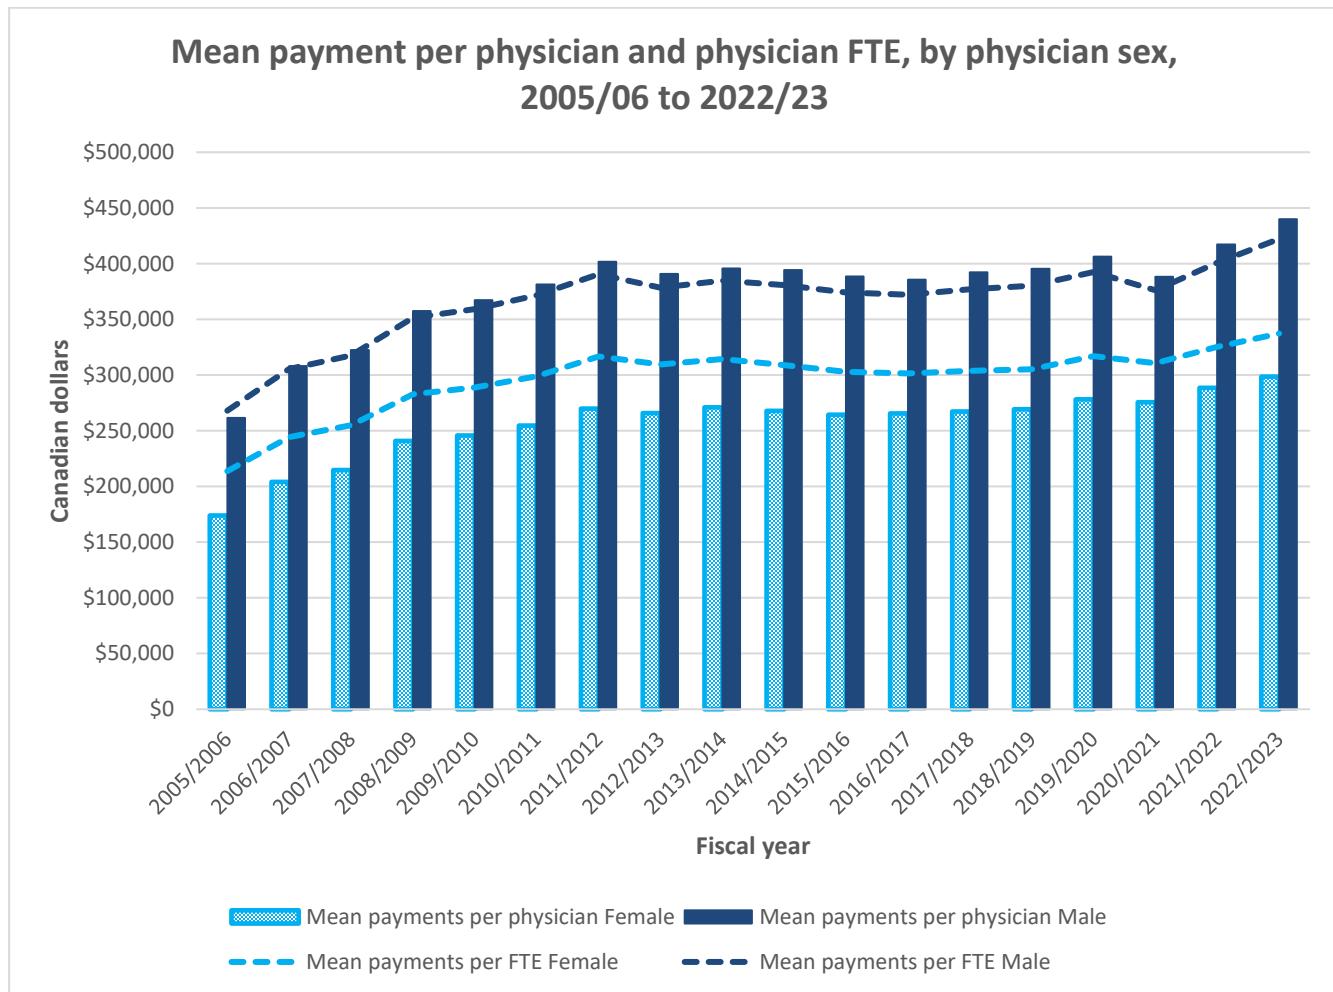

Figure 2: Mean payments to physicians in Ontario, stratified by physician sex, between fiscal years 2005/06 and 2022/23. FTE = Full-time equivalent.

Intensity per physician has declined

Average payments to physicians have remained steady since 2011/2012 yet the number of practicing physicians has increased.

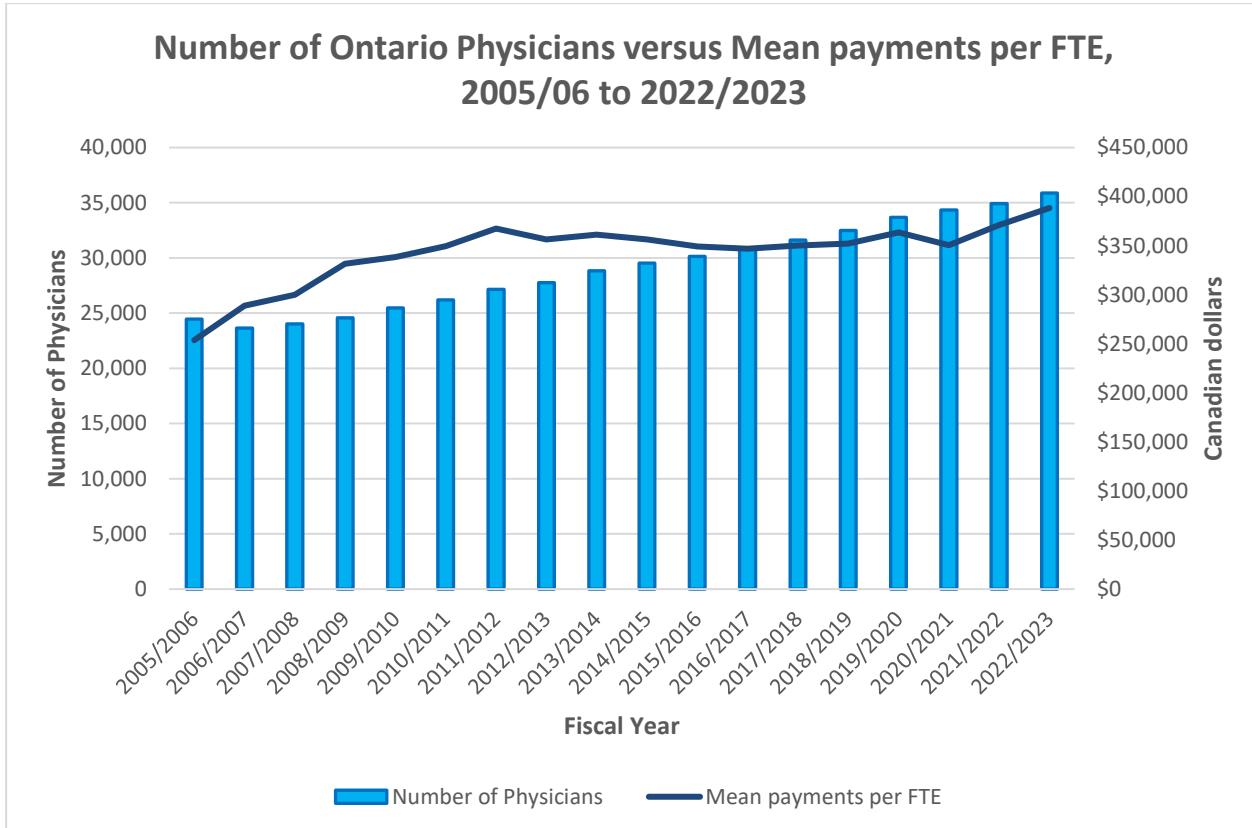

Figure 3. The number of physicians in Ontario plotted against mean payments per FTE, between fiscal years 2005/06 and 2022/2023. FTE = full-time equivalent.

All results stratified by physician sex, including payments by physician specialities, can be found at the end of this report.

Methodology

Study Population

All active Ontario physicians.

Time Frame

The study reports physician payments for Ontario and by specialty for fiscal years 2005/06 to 2022/23.

Inclusion/Exclusion Criteria

Cohort inclusion criteria

Physicians were included if they had an Ontario postal code and payments in at least one of the payment databases held at ICES: OHIP, Architected Payments and GAPP/DSS. Physicians whose total payments for the year were negative (-) were not included in the final totals.

Cohort exclusion criteria

Out of province physicians, out of country physicians and clinical fellows were excluded from the physician totals. Claims that included dummy physician numbers (e.g., for processing reciprocal medical billings), duplicate claims and technical fees were excluded when estimating payment totals and calculating physician full-time equivalents (FTEs). Physicians were excluded if their total payments from all sources was ≤ 0 .

Specialty Groupings

For the purpose of calculating FTEs, specialties were grouped as follows:

- All pediatric medical subspecialties were aggregated as Pediatric Subspecialties
- GP/FP includes Community Medicine/Public Health and physicians from any other specialty whose functional specialty was GP/FP. FP/Emergency Medicine physicians were only included if their functional specialty was GP/FP; otherwise, they were included with Emergency Medicine.
- Medical Genetics and Neonatal-Perinatal Medicine were included with Pediatrics.
- Gynecological Oncology was included with Obstetrics & Gynecology (OB/GYN).
- Pediatric General Surgery was included with General Surgery.
- Medical Biochemistry and Medical Microbiology were combined into Laboratory Medicine.
- Hematological Pathology and Neuropathology were included with General Pathology.
- Occupational Medicine was included with Internal Medicine.

No FTE was calculated for physicians or physician numbers identified as 'Dummy Number', 'Fellow', 'Out of Country' or "Out of Province.'

Analysis

The total payment amount for each year was calculated by summing payments from all sources. Certain technical fees have been excluded. Certain types of payments are not made to individual physicians but to groups or to a number of groups that are part of a single payment contract. To allocate these payments to individual physicians, the block payments for a given month were divided evenly between all physicians with active affiliations to that group during that month. This will in all likelihood overestimate the payments to some physicians and underestimate the payments to others but the magnitude of the effect will vary depending on the proportion of payments that are group or block payments. The effect will be minimal for specialties that receive most of their payments via fee-for-service.

For the purpose of calculating FTEs, specialties with small numbers of physicians (such as Pediatric Subspecialties) were grouped together.

Each physician's specialty during a given year was based on their self-reported specialty, which was then compared with their practice-based specialty.

An FTE was calculated for each physician. This is a relative number that indicates where a physician's total payments fall on the distribution of payments within their specialty using the methodology developed by Health Canada. An FTE of 1.0 indicates that the physician's total payments fell between the 40th and 60th percentile of the distribution for that specialty.

For each grouped specialty, the mean total payments per physician and per FTE were calculated. We also calculated the median and percentiles for total payments per physician by specialty.

We also report the total payments to all physicians in the specialty for each year and the breakdown by payment source (i.e., Fee-for-Service (FFS), Academic Health Science Centre (AHSC), Alternate Payment Plan (APP), Emergency Department Alternative Funding Agreement (EDAFA), Primary Care Model, FFS COVID19 related codes and Other Non-FFS. In accordance with the ICES re-identification risk assessment policy, payment sources were combined into an All Others category where there were payment amounts from one or more sources that were based on fewer than 6 physicians. An empty cell indicates no payments from the source in the year indicated.

For primary care physicians, an additional analysis breaks out their mean payments by primary care model and payment category. An empty cell indicates no payments fell within the category in the year indicated.

In response to the COVID-19 pandemic, many physician services were provided virtually via phone or some type of video link. New OHIP feecodes were introduced for these services and replaced the traditional feecodes used for in-person visits and consultations. There were also new billing feecodes introduced for the provision of services specific to COVID-19 such as sessional fees for work in COVID-19 assessment centres or vaccination clinics.

Physician sex was ascertained from the Corporate Physician Database at ICES. Physician sex is reported to ICES as a binary response; male or female only. Information on physician gender is not available at ICES nor is represented in this report.
